IN THIS EXCERPT

The content for this excerpt was taken directly from IDC MarketScape: Worldwide Cybersecurity Consulting Services 2024 Vendor Assessment (Doc # US50463223). All or parts of the following sections are included in this excerpt: IDC Opinion, IDC MarketScape Vendor Inclusion Criteria, Essential Guidance, Vendor Summary Profile, Appendix and Learn More. Also included is Figure 1.

IDC OPINION

As a growing number of organizations view cybersecurity as a strategic business enabler, along with a surge of regulatory requirements across the world, the quest for quality cybersecurity consultants and trusted cybersecurity advisors hits an all-time high.

In this IDC MarketScape study, IDC assesses the following cybersecurity consulting offerings closely, while most of the featured vendors in this study do have a broader portfolio that goes beyond cybersecurity consulting services:

- Cybersecurity strategy planning and program transformation services
- Security architecture assessment and design services
- Cyber-resilience consulting services

Depending on the requirements, cybersecurity consulting services can be consumed in a discrete, bespoke fashion, but very often services are structured as a component of or integrated into a larger IT or business transformation initiative.

IDC conducted a global survey with 901 organizations to understand the buying trends of cybersecurity consulting services. The survey gathered direct tech buyer feedback for their respective cybersecurity consulting services providers across the world. Most of these firms are featured in *IDC MarketScape: Worldwide Systems Integrators/Consultancies for Cybersecurity Consulting Services 2024 Vendor Assessment* (IDC #US50463423, January 2024), and the remaining ones are studied in this IDC MarketScape.

IDC finds most of the participating firms have solid technical capabilities and strong cybersecurity skills. Among all the evaluation criteria, "skills and experiences of key personnel engaged in the project" showed positive remarks from the 901 surveyed organizations that utilize the cybersecurity consulting capabilities of the studied firms.

The very nature of cybersecurity consulting services relies heavily on the expertise of consultants. Cybersecurity consultants should have in-depth knowledge and experiences of one or multiple security domains, for example network security, security operations, incident response, regulatory compliance, and operational technology (OT) security, to support enterprises' needs. Industry-specific knowledge will be a bonus and highly appreciated by tech buyers.

Many of the firms were showing positive output in regard to delivery and people-related criteria, for instance project governance, meeting data privacy and sovereignty requirements, and engaged cybersecurity professionals being very responsive and professional. In contrast, cybersecurity consulting services providers should improve on the innovation aspects, including the proprietary intellectual property (IP), tools, and frameworks used in the engagement and effectiveness of using emerging technologies like AI and generative AI (GenAI) in the delivery and client engagement.

What is more, a good number of security services vendors package their cybersecurity offerings in a highly flexible way. There is a rising trend to package professional security services into a managed-, subscription-, or retainer-based model, such as expertise on demand (EOD) or cyber as a service (CaaS). These models are particularly attractive to midmarket.

IDC MARKETSCOPE VENDOR INCLUSION CRITERIA

To be included in this IDC MarketScope for cybersecurity consulting services, security services vendors must be able to provide services in the categories of cybersecurity strategy planning, transformation, security architecture assessment and design, and cyber-resilience consulting services. Further:

- A security services vendor must operate with a multinational footprint.
- A security services vendor must have a total revenue of cybersecurity consulting services that exceeds \$25 million in 2023.

ADVICE FOR TECHNOLOGY BUYERS

In the highly competitive cybersecurity services market, buyers serve their organizations well by expressing assertive expectations and conducting thorough evaluation. Guiding buyers' evaluation, IDC offers the following advice:

- **Multidisciplinary model:** Evaluate vendor's multidisciplinary model and ensure the ability of the vendor to demonstrate an understanding of issues faced by stakeholders including those from outside the security functions such as risk, compliance, operations, IT, networks, finance, and engineering. On this topic, instead of considering an IT tabletop exercise, it might be more useful to have an entire operational tabletop exercise.
- **Addition of training hours:** For a transformation type of project, mandate a certain number of training hours or some cybersecurity awareness sessions in the scope to enhance the overall awareness to the relevant threats, typical cyberattack techniques. Security breaches often tie back to user actions. Fostering a security-aware culture within the organization is as important as strong security controls. Some of the evaluated cybersecurity services vendors have explicit cybersecurity training or learning and development offerings as part of their portfolio.
- **Innovation:** Innovation demonstrated throughout the engagement is a critical factor to differentiate cybersecurity consulting services vendors. While there is considerable hype around AI, examine the prospect cybersecurity consulting vendors' own way of adopting AI and GenAI, especially how do they ensure security and sovereignty issues of AI. Key questions you must ask include:
 - How do you monitor and audit AI systems?
 - What measures do you take to ensure responsible AI practices, including fairness, transparency, and accountability in your algorithms?
 - How are you protecting against unauthorized data entry into an AI model?
 - How do you plan to bring continuous improvement?
- **Communication:** Consider a vendor's expertise in communicating at the C-suite and board levels. In a cybersecurity consulting project itself, communication and stakeholder management are critical factors of delivering results successfully and on time. In this study, we have assessed vendors' capabilities to support boardroom communication. A handful of

vendors do have the capability to articulate risk in the boardroom and effectively connect technical risks to the business challenges without so much technical jargon used.

VENDOR SUMMARY PROFILES

This section briefly explains IDC's key observations resulting in a vendor's position in the IDC MarketScape. While every vendor is evaluated against each of the criteria outlined in the Appendix, the description here provides a summary of each vendor's strengths and challenges.

Trustwave

Trustwave is positioned in the Major Players category in this 2024 IDC MarketScape for worldwide cybersecurity consulting services.

Trustwave, a global cybersecurity services vendor, employs more than 1,200 staff across 13 countries in the world. In a strategic move, the vendor announced the buyout from its current parent company – Singapore Telecommunication (i.e., Singtel). The acquisition by MC2 Security Fund – the private equity fund of internationally recognized security advisory firm The Chertoff Group – successfully closed in January 2024.

Given the track record of the investments made by the Chertoff Group, it is a positive move for Trustwave because this acquisition will enable the firm to solely focus on its core cybersecurity business and penetrate the previously untapped sectors.

Trustwave's consulting services are tailored to clients' priorities. The company covers all aspects of strategy, governance, risk, and compliance, with region and industry-specific focus areas. The company offers bespoke cybersecurity strategy services, assisting clients with reviewing and refreshing existing security strategies and operating models or building one from the ground up.

The main practice areas are:

- **Cyber Advisory services** including SOC build and design, security road map development, data security and privacy compliance, identity and privileged access management programs, integrated threat intelligence, and cyber-risk assessment and strategy
- **Architecture Assessment and Design services** including security maturity assessment, cloud security assessment, vulnerability assessments, assessment of edge, endpoint devices, network architecture, DevSecOps architecture, and OT and IoT evaluation and assessments
- **Penetration Testing services** including application testing, network testing, wireless penetration testing, social engineering testing, OT/IoT testing, Red Teaming, and Purple Teaming
- **Digital Forensics and Incident Response services** including incident readiness review, data exposure investigation, incident response plan development, and incident response simulation

Trustwave's renowned SpiderLabs team delivers a range of expert security and penetration testing services, along with security research and threat intelligence. While Trustwave's Cyber Advisory team focuses on providing pragmatic advice to help organizations identify and prioritize cyber-risks to support internal alignment and to enable necessary change, the company's Cyber Architecture and Integration team works with clients to design, build, and optimize solutions to mitigate cyberthreats.

To support and effectively deliver these services, Trustwave owns a set of unique IPs, including the Trustwave Security Colony that gives clients instant access to the tools, frameworks, and insights they need to be proactive for their cyberdefense. Trustwave sees its clients as partners in making Security

Colony a success, so it gives thousands of users signed up for free. It also makes a maturity assessment tool and a vendor risk scoring tool without charge for organizations to use in their own respective domains. It is a key differentiator.

Key security partners are Microsoft, Palo Alto Networks, CrowdStrike, AWS, and SentinelOne, among others that Trustwave can support.

Strengths

- Trustwave has been one of the longest serving CREST accredited providers for independent penetration testing and red teaming services. Technical threat research and programmatic intelligence are infused into Trustwave services in assisting its clients' cyber-resilience needs. The breadth of its offerings is well regarded by its clients.
- According to its clients, Trustwave has strong operational delivery, planning, and high-level design, which are "well thought of and considered top strengths (for Trustwave)." A client comments that Trustwave "people are very good, proactive, and responsive;" and another client says, "its penetration testing people will deliver things above and beyond."
- Trustwave pays close attention to capture client feedback and ensure a high client satisfaction level. Besides executive-level oversight, it has a multistep approach that touches clients at varying stages throughout their interactions with Trustwave, including a client feedback module into its Fusion Threat Investigation interface.
- IDC's *Worldwide Cybersecurity Consulting Services Survey* respondents give Trustwave positive remarks for delivering work that achieves business and technology objectives; key assets, tools, and frameworks used in the engagement; and value-added services.

Challenges

- According to clients, Trustwave can improve its industry-specific expertise. The recent verticalized Trustwave SpiderLab threat reports (including healthcare, financial services, retail, hospitality, and manufacturing) is a good start.
- Trustwave can enhance its contractual process to make it more smooth for its clients. The same IDC's *Worldwide Cybersecurity Consulting Services Survey* respondents indicate room for improvement in areas like access to talent/skills and change management.

Consider Trustwave When

Small to large enterprises at varying levels of maturity should consider Trustwave because it has a comprehensive diagnostic and pragmatic approach toward cybersecurity. In addition, organizations should consider Trustwave when priorities include skills crisis, security strategy/road map development, addressing security complexities, and cyber-resilience needs.

APPENDIX

Reading an IDC MarketScape Graph

For the purposes of this analysis, IDC divided potential key measures for success into two primary categories: capabilities and strategies.

Positioning on the y-axis reflects the vendor's current capabilities and menu of services and how well aligned the vendor is to customer needs. The capabilities category focuses on the capabilities of the

company and product today, here and now. Under this category, IDC analysts will look at how well a vendor is building/delivering capabilities that enable it to execute its chosen strategy in the market.

Positioning on the x-axis, or strategies axis, indicates how well the vendor's future strategy aligns with what customers will require in three to five years. The strategies category focuses on high-level decisions and underlying assumptions about offerings, customer segments, and business and go-to-market plans for the next three to five years.

The size of the individual vendor markers in the IDC MarketScape represents the market share of each individual vendor within the specific market segment being assessed.

IDC MarketScape Methodology

IDC MarketScape criteria selection, weightings, and vendor scores represent well-researched IDC judgment about the market and specific vendors. IDC analysts tailor the range of standard characteristics by which vendors are measured through structured discussions, surveys, and interviews with market leaders, participants, and end users. Market weightings are based on user interviews, buyer surveys, and the input of IDC experts in each market. IDC analysts base individual vendor scores, and ultimately vendor positions on the IDC MarketScape, on detailed surveys and interviews with the vendors, publicly available information, and end-user experiences in an effort to provide an accurate and consistent assessment of each vendor's characteristics, behavior, and capability.

Market Definition

IDC defines cybersecurity consulting services as a range of professional services activities that help organizations plan, design, assess, or transform across their cybersecurity practice. In the scope of this particular IDC MarketScape study, the cybersecurity consulting services include strategy planning and program transformation, architecture assessment and design services, and cyber-resilience consulting. Examples of these services include:

- Security road map development
- Security strategy advisory
- Security operator center (SOC) design and build
- Security sourcing strategy
- Data security and sovereignty advisory
- Identity access management design and transformation
- Integrated threat intelligence design and consult
- Cybersecurity transformation
- Cyber-recovery consulting
- Cyber-supply chain resilience planning
- Architecture assessment services across networks, endpoints, edge, cloud, IoT, OT, and so forth

Synopsis

This IDC study represents a vendor assessment of cybersecurity consulting services for enterprises through the IDC MarketScape model. It assesses 15 cybersecurity services vendors offering cybersecurity strategy advisory, architecture assessment and design, cyber-resilience consulting, and cybersecurity transformation services. The assessment reviews both quantitative and qualitative characteristics that define current market demands and expected buyer needs for cybersecurity consulting services. The document provides detailed vendor profiles, highlighting their strengths, challenges, and key offerings.

"The role of a trusted cybersecurity partner has increased given the rising importance of cybersecurity to an organization's overall resiliency and success," says Cathy Huang, research director, IDC's Worldwide Security Services. "This trend is manifested in the growing demand for security and risk assessment, security strategy, and program advisory that drives all kinds of vendors, be it telecom providers, managed security pure players, cybersecurity specialists, IT outsourcing providers, or value-added resellers, to put strategic focus to grow their own cybersecurity consulting capabilities."

About IDC

International Data Corporation (IDC) is the premier global provider of market intelligence, advisory services, and events for the information technology, telecommunications, and consumer technology markets. With more than 1,300 analysts worldwide, IDC offers global, regional, and local expertise on technology, IT benchmarking and sourcing, and industry opportunities and trends in over 110 countries. IDC's analysis and insight helps IT professionals, business executives, and the investment community to make fact-based technology decisions and to achieve their key business objectives. Founded in 1964, IDC is a wholly owned subsidiary of International Data Group (IDG, Inc.).
