Trustwave MailMarshal Integrated Cloud

ADD API-POWERED, LAYERED SECURITY TO M365

Benefits

- 99.99% phishing and malware capture rate
- Set up world class email security protection for M365 in minutes
- 25+ years protecting organizations against phishing and BEC
- 0 Clients reported ransomware infection in 20+ years
- < 0.001% spam false positives reducing business admin overheads
- Reduce burden on your security team
- Layers of proprietary AI-powered detection
- Decades of leadership in email security supported by Trustwave SpiderLabs elite threat detection security team

Ease of Implementation

- Protect emails without MX record change, ensuring no disruption in email flow
- Effortless and immediate deployment, optimized M365 protections out of the box

The fact remains, email is the primary entry point for cyber threats, including phishing, ransomware, and BEC attacks

Email is not only the number one attack vector favored by threat actors, but these adversaries are continuously developing their techniques, tactics and procedures to try and gain entry to an organization. Microsoft is the de facto standard for email and collaboration. Threat actors recognize this, and their attacks are designed to evade Microsoft's defenses. MailMarshal's Integrated Cloud offering optimizes Microsoft 365 protection within minutes by reducing phishing and malware threats by over 99% when layered on top of M365 without the need to change your MX record.

MailMarshal + M365 = World Class Layered Email Security

MailMarshal's Integrated Cloud solution enhances M365's email security protections, layering on AI-powered, best-in class detection capabilities to block the most sophisticated email attacks before reaching your inbox. By combining the proprietary defense filters in Trustwave MailMarshal with the built-in security protections in Microsoft 365 delivers unprecedented detection for the #1 attack vector – email.

- **Advanced Phishing & BEC Defense –** Stop highly targeted email attacks, including credential phishing and executive impersonation.
- **AI-Powered Threat Detection –** Five specialized proprietary AI/ML engines analyze behavioral patterns and threat intelligence to block evolving threats.
- **Insider Threat Protection –** Detect and prevent threats originating from compromised accounts within your organization.
- **Seamless Integration with M365 –** Protect cloud-based email environments with layered security through an in-line and API deployment, requiring no MX record changes
- **Enhanced Compliance & Data Protection –** Prevent sensitive data loss and maintain regulatory compliance with DLP and encryption capabilities.

Future Proof Your Email Security

Take your protection to the next level and strengthen your environment beyond basic email protection. MailMarshal's Integrated Cloud solution provides a non-disruptive, highly effective layered security approach that blocks the latest sophisticated threats before they reach your employees, reducing the risk of costly data breaches and financial loss.
